 FANATIC

To provide every sailor with maximum fun, FANATIC sets the highest standards for quality and performance.

Modern technologies, high quality materials, futuristic shapes, ingenious details, refined production and constant innovation. FANATIC sets trends. With lightweight and fast boards. For total windsurfing fun!

TOP DESIGNERS, WORLD CUP COMPETITORS AND HIGH TECH PRODUCTION EXPERTS - AN UNBEATABLE TEAM.

The superiority of FANATIC products is the result of the experience of our team of experts. World Cup professional **Philip Pudenz** is in charge of board development for FANATIC. Philip incorporates all the design trends in World Cup competition and Hawaiian master shaper, **Larry McElheny**, transforms these ideas into shapes which are then tested in the flat waters of Kailua Beach, as well as the surf of Hookipa, Hawaii.

All prototypes are then put through the paces in World Cup competition. **Dana Dawes** and **Maui Meyer**, two top World Cup contenders, and members of the FANATIC World Cup Team, test all boards in intensive regatta competition until they are ready to go into production. Our racers

evaluate the shapes for speed, maneuverability, proper volume distribution, foot-strap placement, and many other fine performance details.

Evaluation without compromise. Design testing that delivers success: Dana Dawes, 1986 World Cup Champion in the Wave Riding and Slalom disciplines.

Maui and Dana have just received a powerful addition to their team. **Robert Territehau** from New Caledonia, famous for his radical performance in surf conditions, is the newest member of the FANATIC World Cup Team. Robert is concentrating on the short FANATIC boards, the Bee and Boa, to keep him on top in slalom and wave competition.

FANATIC PRODUCTION BOARDS CLEARLY IN THE LEAD

FANATIC developments are the basis for refined, performance products. Performance proven in demanding regatta conditions. FANATIC production equipment has been sailed to winning places in countless regattas worldwide. In international competition, the FANATIC Team has taken the lead. **Andrea Hoepfner**, for example, swept the 1986 Production Board Worlds on her FANATIC Cat and FANATIC Bee.

FANATIC ABOUT THE SMALLEST DETAIL

Professional experience and innovative ideas are transformed into perfect products by our experts and engineers. All FANATIC components are manufactured in our own production facility and thoroughly tested in our quality control and R&D departments. This enables FANATIC to deliver consistent quality and functionality in products designed to excel. Leading edge technology, such as Ultra Carbon and Protec Carbon. FANATIC. High technology at a competitive price. A.R.T. Refined components and high performance sails and rigs. FANATIC for fun and maximum performance.

FANATIC '87 - SUPER SHAPES AND EXCEPTIONAL STIFFNESS

Innovative developments are turned into perfect products at FANATIC. Hot new shapes and leading edge production technology result in boards that are incredibly fast, unbelievably durable, highly maneuverable, sensationally light and extremely stiff.

ULTRA CARBON – THE NEW TECHNOLOGY THAT MAKES THE DIFFERENCE

Ultra Carbon in our new high performance boards – the CAT, the BEE and the BOA. Just right for high speed competition in course racing or radical maneuvers in the surf.

Similar to custom board production, the new FANATIC Ultra Carbon technology involves the use of high strength glass cloth instead of commonly used glass matting. Especially woven to form a hybrid composite in a sandwich construction process, it provides all Ultra Carbon line models with the highest degree of durability at a low specific weight. Extra wide unidirectional carbon fiber cloth increases stiffness and helps keep the loss of kinetic energy, (due to flex) to a low level. This enables the sailor to maintain speed on any course. The outer skin of ultraviolet stabilized polycarbonate material provides a high density finish with excellent impact resistance and long life. This lightweight, high-tech material combination keeps the new FANATIC Ultra boards on the leading edge of performance and technology, in competition and just for fun.

PROTEC CARBON – INCREDIBLY DURABLE, UNBELIEVABLY LIGHTWEIGHT

A triumph of FANATIC progress. Protec Carbon has been proven a thousand times over in day-to-day use. Protec Carbon boards are lightweight, stiff, impact resistant and extremely durable. The secret lies in the superior use of materials: an EPS core is carefully foamed, dried and tested for tolerance before it is wrapped with unidirectional glass layers. Traditional glass layers with unidirectional carbon stringers are molded in an exclusive VIR (vacuum injected resin) process which forms a homogeneous unit with the outer fiber glass mantle. This glass fiber/carbon cocoon is covered with a thin thermoplastic outer skin in a one step molding process, resulting in Protec Carbon line boards that are incredibly light and durable.

FANATIC RIGS '87 POWER TO SPARE

The true potential of a high performance board can be realized only when used in combination with an efficient rig. For 1987, FANATIC boasts an innovative approach to rig technology. Working in close cooperation with A.R.T. (Advanced Rig Technology), FANATIC has taken the next logical step in the evolution of leading edge rig design. Only A.R.T. satisfies all the requirements of a perfect FANATIC rig. Modern sail shapes, only the best

SPEED WING 6.8

SPEED WING 6.2

SPEED WING 5.8

materials, high quality construction, continuous innovation for even more performance. For these reasons, FANATIC boards are now exclusively equipped with the new A.R.T. sails and rig components. Sail designs that are faster and more fun. A.R.T. – setting trends worldwide in Advanced Rig Technology.

NEW AT FANATIC: A.R.T. CUT AWAYS – THE LOGICAL STEP INTO THE FUTURE.

FANATIC believes in the sails of the future. Sails like the new Cut Away Speedwings of the Protec Carbon line. All Cut Away sails by A.R.T. designer, Monty Spindler, are based on a totally unique concept which clearly improves rig efficiency. Important design features are responsible for the advantages of the

Speedwing Cut Away: the totally new luff construction technique which provides enhanced center of effort stability and sail rotation. The HTP-luff-stripe is sewn on a convex bias between the sail head and tack, stabilizes the forward sail shape in all wind conditions and forms a clean leading edge profile. It reduces leech tension and in combination with the Cut Away, the upper sail section is free to seek the proper angle of attack for variations in wind speed and direction. The result is a more efficient sail with improved handling and a broader range of use. Sail size selection is now easier than ever and sail changes, as well as financial investment, are reduced.

FANATIC Speed Wing Cut Aways. More time to sail, more time to have fun!

FANATIC SHAPES '87 - AVAILABLE FOR ALL KINDS OF FUN

Each board type requires a unique shape designed for specific conditions and user characteristics. This is why FANATIC offers a complete line of performance boards built to satisfy the demands of today's sailor... on the race course, in the waves, or cruising the lakes and bays. Boards that are made for specific requirements, but can also handle a broad range of conditions, and satisfy a wide sailor spectrum.

NEW AT FANATIC - A GREAT CHOICE OF RIGS

FANATIC sets new trends. Boards have offered the sailor a choice for quite some time. Rigs, however, in the past have been limited to a specific model. And if the sailor needed a specific rig, he had to put it together from after market components. FANATIC, with its new Protec Carbon line, for the first time offers three different rig choices. Now it is easy to select the proper rig performance based on ability and individual sailing conditions.

FANATIC SPEED WINGS

Revolutionary Cut Away sails. Extremely powerful with excellent planing efficiency and ease of handling.

FANATIC BOOSTER CUTS

Performance sails for speed and comfort in the lower and medium wind ranges.

FANATIC POWER CUTS

Fully battened Mylar comfort sails for unlimited fun.

All three sail types are available in a wide range of sizes to make rig and sail selection easy and convenient.

WAVE SLALOM 270

ULTRA CAT

The Cat, the most sold raceboard in the world is now available in an exciting new shape. The new **ULTRA CAT** is the ideal synthesis of a superfast race board and an easy to handle full size funboard. Super speed in high winds and excellent performance in lighter wind conditions. A double concave hull shape on a V basis, combined with a flatter tail, lets the Ultra Cat plane early, while super hard rails, a stiff daggerboard and racing fin allow excellent sailing to windward. In maneuvers, the Cat turns quickly, very much like a longer slalom board. Equipped with a new contoured deck for comfort and control, the Ultra Cat delivers incredible speed and maximum fun. Ultra Cat, if you want to be first.

ULTRA BEE

The **ULTRA BEE**, developed in World Cup competition, is a hot slalom shape. Extremely light weight, designed for straight line speed, as well as precision maneuvers, the Ultra Bee will always hold the lead in slalom competition. With its concave nose, double concave mid-section, rounded diamond tail and clean rails, the Ultra Bee planes early and achieves maximum speed with excellent control. Even when sailing to windward, the Ultra Bee is hard to beat, an astounding feat without a centerboard. Due to its volume, all but the heaviest of sailors will find uphaul starting a breeze. Ultra Bee - the perfect speed board for FANATIC sailors.

ULTRA BOA

ULTRA BOA, a new slalom/wave board shaped with a revolutionary hydrodynamic design. Combining the qualities of a slalom board with the capability of a wave board, the Ultra Boa delivers tremendous straight line speed, yet excels in surf conditions. Sporting a new hull shape which was developed for World Cup competition, the Ultra Boa features double concave channels for more speed, hard tucked under rails on a V basis and a winger pintail for clean, quick maneuvers. The efficient fin concept guarantees minimum resistance for maximum board speed. An ergonomically contoured deck is incredibly comfortable and gives the sailor complete control. Ultra Boa - the perfect slalom/wave combination.

FANATIC FOX

FANATIC FOX, last year's test winner in its class, is an early planing shape that performs as well in light wind as it does in high wind. The vario concave bottom easily adapts to changing conditions, while the gener-

ous volume of the Fox in the nose area improves stability. A long water line adds speed in light winds while in high winds, the planing surface is reduced and the Fox becomes a competitive raceboard with excellent dynamic floatation. Despite all these special talents, the Fox is easy to handle and represents the ideal allround fun raceboard.

FANATIC VIPER

FANATIC VIPER, our best selling board for the last two years. It is extremely easy to sail and jibes very quickly. The quadro concave nose provides dynamic lift for early planing while the double concave midsection lends excellent directional stability. The rounded diamond, single winger tail adds maneuverability and control during high speed turns. The Viper represents the ideal combination of speed and agility in one board and can be used as a maneuver funboard for heavy sailors and as a raceboard with allround character for lighter weight sailors. FANATIC Viper, the fun race board for total windsurfing fun.

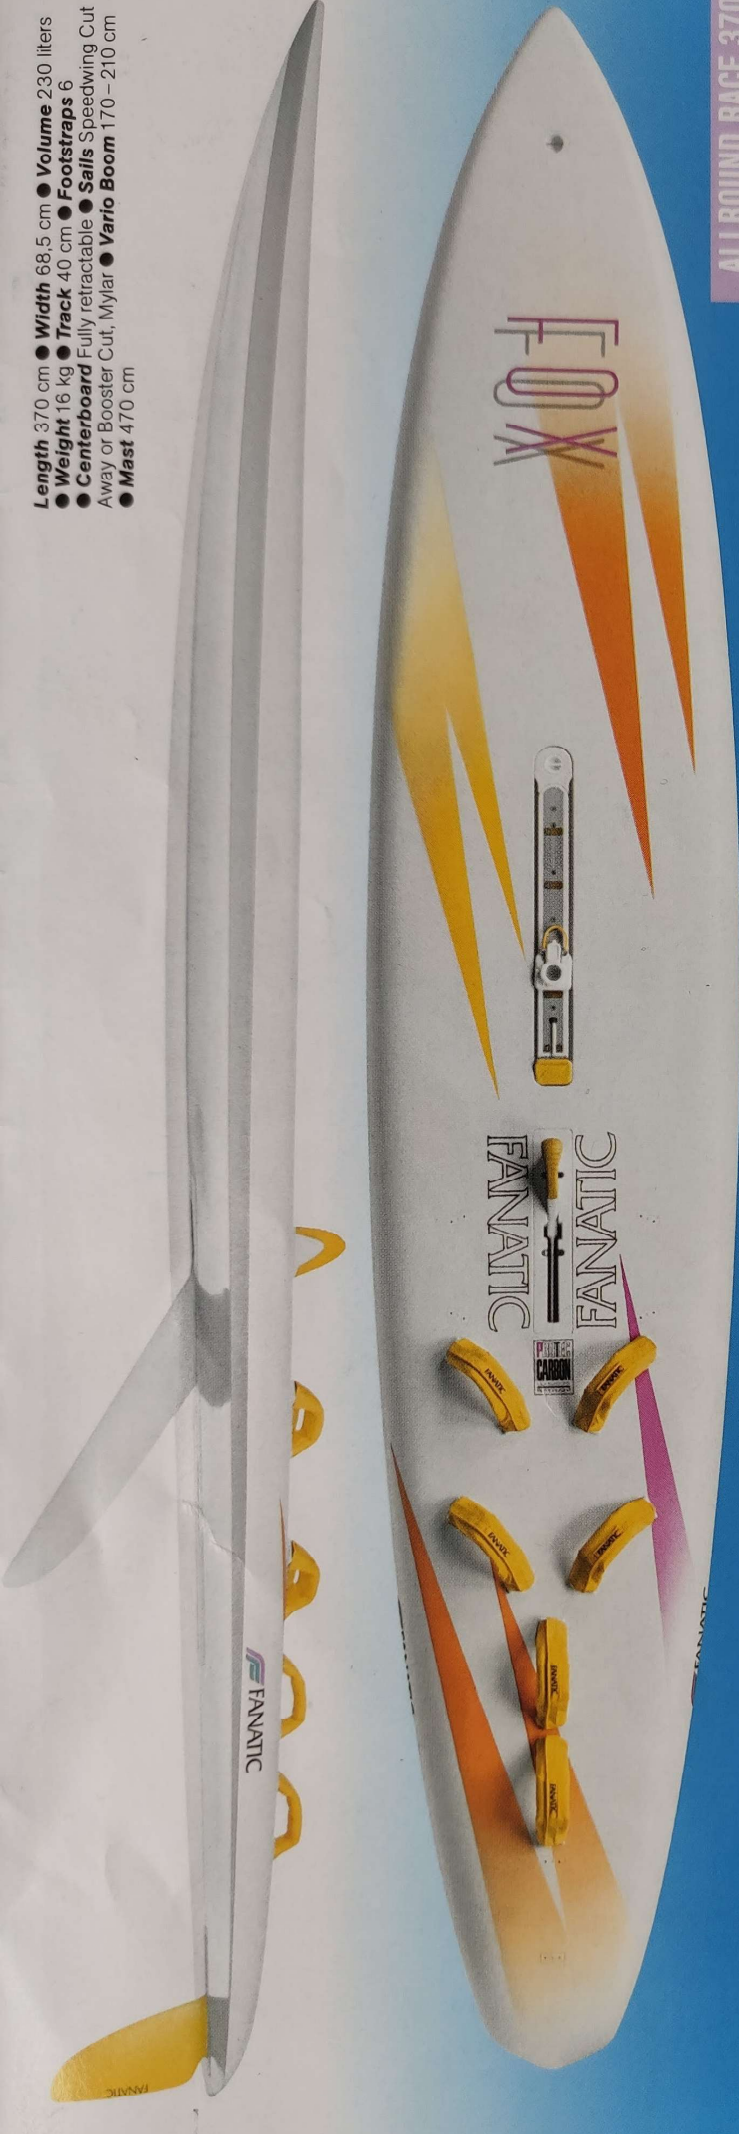

FANATIC BAT

FANATIC BAT, a shorter funboard for maximum speed and radical maneuvers. High top speeds are the result of an advanced hull shape. Single concave in the nose for early planing, double concave in the mid-section for directional stability and a continuous V in the tail for footsteering and maneuvers. Hard clean rail shapes, as well as a rounded pintail, allow the Bat to sail precisely through maneuvers while maintaining maximum speed. In lighter winds, the fully retractable centerboard makes sailing to windward easy and adds security for the transitional sailor. FANATIC Bat - the maneuver and speed funboard in a shorter length.

FANATIC BEE

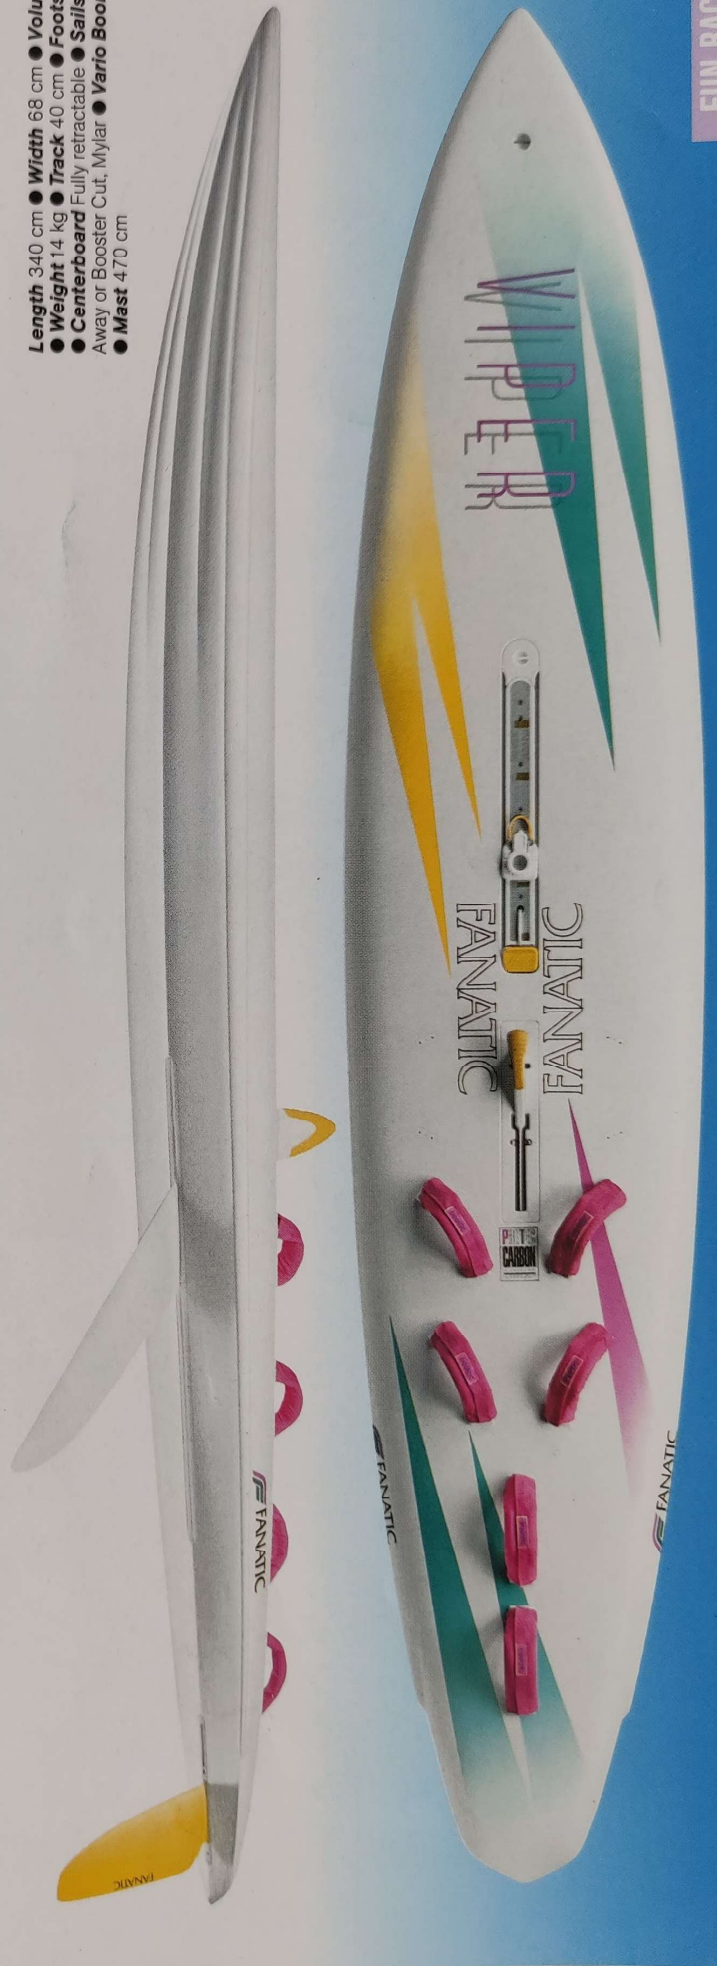

FANATIC BEE - Designed as a competitive slalom board, the Bee has made its mark in World Cup and international funboard competition. Extremely light and designed for speed and care-free handling, it is the perfect board for funboard reaching and slalom competition. A sleek shape, with a single concave nose, double concave mid-section and V tail, the Bee delivers speed and control and with its generous volume it planes easily, even for heavier sailors. When sailing to windward, the Bee is not easy to beat, a remarkable feat for a board without a centerboard. As a slalom board, with a rounded diamond tail shape and clean rails, the Bee is easy to jibe and control. And for all but the heaviest of sailors, the Bee allows for conventional uphaul starting. FANATIC Bee - the fast slalom speed board.
